## Sticks

Collect a number of sticks. The investigation is to find the maximum number of intersections as the sticks cross.

With one stick, no sticks cross.

With 2 sticks, there is one intersection.

With 3 sticks, how many intersections are there? $\qquad$
Record the maximum number of intersections for each number of sticks.

| Number of sticks | Number of <br> intersections |
| :--- | :--- |
| 1 | 0 |
| 2 | 1 |
| 3 |  |

Can you spot the pattern?
$\qquad$
$\qquad$

Can you explain the reason for the pattern?
$\qquad$
$\qquad$
Predict the next number of intersections and test your idea.

## Answers

| Number of sticks | Number of <br> intersections |
| :--- | :--- |
| 1 | 0 |
| 2 | 1 |
| 3 | 3 |
| 4 | 6 |
| 5 | 10 |
| 6 | 21 |
| 7 | 36 |
| 8 |  |

The number of intersections are triangular numbers. Each new stick intersects all the others. This means the $9^{\text {th }}$ stick will intersect all the other 8 , adding 8 intersections.
